

FEATURES

- Industry Standard 2"x5"x10" Package
- 500W Power at 0-50°C
- Active Power Factor Correction
- Efficiency up to 75%
- Power Fail Warning Signal
- 80A Main Output
- Remote Sense on Main Output
- Remote Inhibit Control
- Class B conducted EMI Performance
- Global 90-264VAC Input
- Active Current Sharing on Output V1
- RoHS Compliant

DESCRIPTION

The PX500 is a family of 500W, multiple-output power supplies developed for a broad range of applications. All outputs are fully isolated and regulated for either positive or negative ground reference. The outputs can also be connected in series to develop higher voltages or in parallel to develop higher currents.

The two-switch forward topology used in the PX500 supplies has been field-proven for high reliability. The mag-amp post-regulators used on the auxiliary outputs will support high peak currents.

With a global input of 90-264VAC, safety agency approvals to UL1950, CSA C22.2 No. 234-M90, and EN60950, EMI compliance to Class B FCC Part 15, the PX500 was designed with globally-deployed product applications in mind.

The PX500 is available in various output voltage/current configurations and with various cover options. Additional features include remote sense compensation, a power fail warning signal, as well as output inhibit. Several models of the PX500 are also available with RoHS compliance.
